

**itching eased
joy retrieved**

Causes of your dog's sensitivities

Environmental sensitivities may be caused by substances in the environment such as pollen, dust mites, or mould.

Food intolerances, while rare, may be caused by a protein such as chicken or beef.

Nutrition plays an important role in your dog's multimodal therapy, helping to alleviate their itching and manage their sensitivities.

How the right food can help

The benefits of Prescription Diet Derm Complete foods

Novel protein food shown to control clinical signs including scratching, head shaking, sleep & stool quality in dogs with food intolerances.

Visible improvement in skin conditions in as little as 21 days in dogs with food intolerances.

Histaguard Complex, a proprietary blend of bioactives and phytonutrients helps to normalise the immune system reaction to environmental allergens.
